

Operator 107 - Lido Community Staking Module - Validator  
Effectiveness Analysis for 2025-01-12 - 2025-01-16

Metric	Value	Z-Score	Description
Validator Effectiveness	97.236	0.212	A measure of the average performance of a validator across key consensus duties, such as proposing blocks and attesting correctly. A higher rating indicates that the validator consistently participates in securing the network and follows the protocol rules effectively. This metric helps assess the reliability and efficiency of a validator, with poor effectiveness typically resulting in lower rewards and a negative impact on the network's overall health.
