

Operator 99 - Lido Community Staking Module - Average Validator Effectiveness Analysis for 2024-12-25 - 2024-12-27

Metric	Value	Z-Score	Description
Validator Effectiveness	92.916	-0.227	A measure of the average performance of a validator across key consensus duties, such as proposing blocks and attesting correctly. A higher rating indicates that the validator consistently participates in securing the network and follows the protocol rules effectively. This metric helps assess the reliability and efficiency of a validator, with poor effectiveness typically resulting in lower rewards and a negative impact on the network's overall health.
